Office Action Summary

U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No. _____

Art Unit: 1712

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 9-12 and 18-20 drawn to a composition comprising polyethylene terephthalate and elastomeric material, classified in class 525, subclass 177.
- II. Claims 6 and 7, drawn to a composition comprising polyethylene terephthalate, elastomeric material and polyolefin, classified in class 525, subclass 166.
- III. Claims 8 and 13, drawn to a composition comprising polyethylene terephthalate, elastomeric material and foaming agent, classified in class 521, subclass 138.
- IV. Claims 8 and 14-17, drawn to a composition comprising polyethylene terephthalate, elastomeric material, polyolefin, compatibilizer, branching agent and hydrolytic resistance agent and filler, classified in class 525, subclass 64.

The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a molding composition without the chemically interactive polyolefin and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Inventions I and III are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate

Page 3

Art Unit: 1712

product is deemed to be useful as a molding composition without the chemically interactive foaming agent and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Inventions I and IV are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a molding composition without the chemically reactive branching agent and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Page 4

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Additionally, applicant is required to make the following elections of species.

Claims 1-20 are generic to a plurality of disclosed patentably distinct species comprising species for the elastomer that are styrene-butadiene, polybutadiene, polyisoprene and natural rubber. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Claims 1-20 are generic to a plurality of disclosed patentably distinct species comprising species for the product that are railroad tie, post, beam, strut, plank, pole, dock support, deck, boat slip, pier, stake, shovel, rake, ax handle, hammer handle, shingle, baseball bat and cricket bat. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Application/Control Number: 09/811,250

Art Unit: 1712

Further, if Group II or IV is elected, applicant is required to make the following election of species.

Claims 6, 7 and 14-16 are generic to a plurality of disclosed patentably distinct species comprising species of the polyolefin that are polyethylene and polypropylene. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Finally, if Group IV is elected, applicant is required to make the following elections of species.

Claims 8 and 14-17 are generic to a plurality of disclosed patentably distinct species comprising species of the compatibilizing agent are Hytrel-type binder, maleated polyolefin and polyester elastomer comprising polybutadienediol. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Claims 8 and 14-17 are generic to a plurality of disclosed patentably distinct species comprising species of the branching agent that are pyromellitic dianhydride, trimellitic anhydride,

Application/Control Number: 09/811,250

Art Unit: 1712

benzophenonetetracarboxylic acid dianhydride, sulfonyldiphthalic acid dianhydride, 2, 2'-bis (2-oxazoline), and pentaerythritol. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Claims 8 and 14-17 are generic to a plurality of disclosed patentably distinct species comprising species of the hydrolytic resistance agent that are 2, 2'-bis (2-oxazoline), poly (1,3, 5-triisopropylphenylene-2, 4-carbodiimide, N, N'-bis (2, 6-diisopropylphenyl) carbodiimide and 2, 6, 2', 6'-tetraisopropyldiphenyl carbodiimide. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Claims 8 and 14-17 are generic to a plurality of disclosed patentably distinct species comprising species of the filler that are talc, silica, colorant, glass fibers, carbon black and calcium carbonate. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to

Art Unit: 1712

be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
